

Leegality - Frontend Engineer Assessment

Product Listing & Detail Page (Amazon-style)

Objective

Build a simple e-commerce Product Listing Application using the public API:

👉 <https://dummyjson.com/docs/products>

The goal is to evaluate your ability to:

- Work with APIs
 - Build reusable UI components
 - Manage state
 - Implement filtering logic
 - Handle routing
 - Structure clean, maintainable frontend code
-

Application Requirements

The application should have **two main screens**:

1. Product Listing Page
 2. Product Detail Page
-

1 Product Listing Page

Search products...

Smartphone

\$699 ★★★★★ (4.5)

Headphones

\$129 ★★★★★ (4.2)

Wrist Watch

\$250 ★★★★★ (4.7)

Running Shoes

\$89 ★★★★★ (4.1)

DSLR Camera

\$499 ★★★★★ (4.6)

Laptop

\$899 ☆★★★★ (4.3)

Perfume

\$59 ★★★★★ (4.0)

Leather Bag

\$120 ★★★★★ (4.5)

Layout

- Left Side → Filters
- Right Side → Product Grid (cards)
- Pagination at bottom (or API-based limit/skip)

Product Card Should Display:

- Product Image
- Product Name (Title)
- Price
- Rating

Clicking on a product card should navigate to the Product Detail Page.

Filters (Mandatory)

Use the DummyJSON API endpoints:

- GET /products
 - GET /products/categories
 - GET /products/category/{category}
 - GET /products/{id}
-

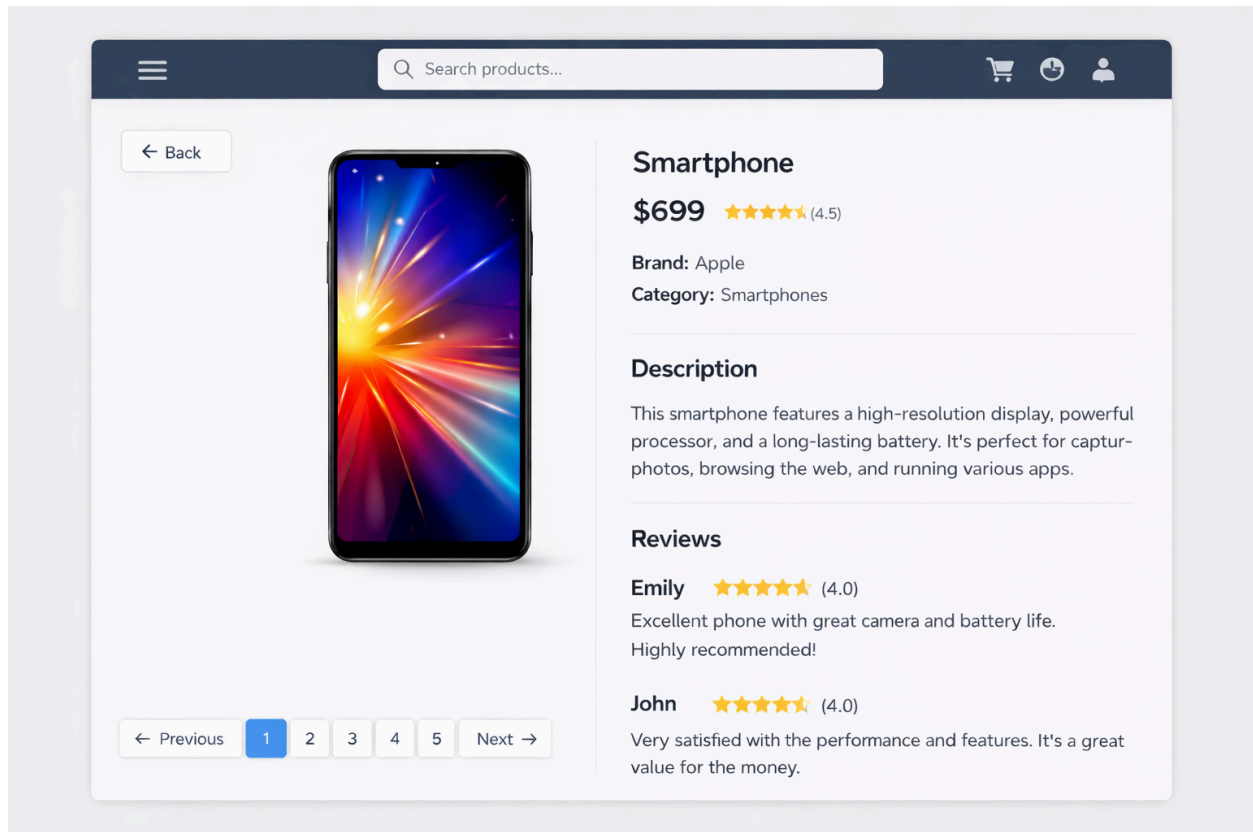

Required Filters

1. **Category**
 - Fetch dynamically from [/products/categories](#)
 - Selecting a category updates product list
 2. **Price Range**
 - Min Price input
 - Max Price input
 - Filter products accordingly
 3. **Brand**
 - Extract unique brands from fetched products
 - Allow selection (single or multi-select)
-

Filter Behavior Rules

- Filters should work together (combined filtering)
 - Changing a filter should update the product list immediately
 - Pagination should reset when filters change
 - Proper loading state must be shown
 - Proper error handling must be implemented
-

2 Product Detail Page

Detail Page Should Display:

- Product Image
 - Product Name
 - Price
 - Rating
 - Description
 - Brand
 - Category
-

Navigation

- Clicking a product card navigates to `/product/:id`
 - A Back button should return to the Listing Page
 - Previously selected filters should remain applied when navigating back
-

Technical Requirements

You may use:

- React (Functional Components preferred)
- React Router
- Hooks (`useState`, `useEffect`, etc.)
- CSS / Tailwind / Basic styling

Avoid using heavy UI libraries unless necessary.

API Usage Requirements

Products must be fetched from:

- <https://dummyjson.com/products>
- <https://dummyjson.com/products/categories>
- <https://dummyjson.com/products/{id}>

You may:

- Use pagination via `limit` and `skip`
 - Implement client-side filtering where required
-

Submission Guidelines

Please submit:

- GitHub repository link
- Demo Link
- README file containing:
 - Setup instructions
 - Assumptions made
 - Architectural decisions
 - Improvements if given more time
